Claim 1 - 7 lack novelty under PCT Article 33(2) as being anticipated by Pintsov (Patent Number: 6125357).

As per claim 1, Pintsov teaches a method for verifying a digital postage mark, the method comprising the steps of:
scanning a mail item to obtain a digital image of the mail item, the mail item including a digital postage mark and a destination address block (Pintsov, Column 4 Line 18 - 24 and Column 5 Line 1);
parsing the digital image to obtain a digital postage mark area and a destination address block area (Pintsov, Column 4 Line 63 - Column 5 Line 22);
extracting a first portion of the destination address block from the destination address block area (Pintsov, Column 4 Line 63 - Column 5 Line 22);
generating a first address block image digest using the first portion of the destination address block (Pintsov, Column 4 Line 63 - Column 5 Line 22);
retrieving a second address block image digest from the digital postage mark area;
comparing the first address block image digest to the second address block image digest (Pintsov, Column 4 Line 6 - 17); and
accepting the mail item when the comparison of the first address block image digest to the second address block image digest is within a predetermined threshold (Pintsov, Column 8 Line 27 - 29).

As per claim 2, Pintsov teaches rejecting the mail item when the comparison of the first address block image digest to the second address block image digest is beyond a predetermined threshold (Pintsov, Column 8 Line 41 - 43).

As per claim 3, Pintsov teaches the second address block image digest is in a cryptographic validation code in the digital postage mark area (Pintsov, Column 8 Line 41 - 43).

As per claim 4 and 5, Pintsov teaches a method for generating a mail item, the method comprising the steps of:
generating an address block image digest using a first portion of a destination address block of the mail item (Pintsov, Column 4 Line 16 - 19);
using the address block image digest as a recoverable portion of a cryptographic validation code (Pintsov, Column 4 Line 66 - Column 5 Line 10);

formatting the recoverable portion of a cryptographic validation code with other postal data for digital postage mark information computation (Pintsov, Column 5 Line 1 - 6); and
printing the digital postage mark information on one of the mail item, label or tag (Pintsov, Column 5 Line 1 - 6).

As per claim 6, Pintsov teaches scanning the mailpiece to obtain a digital image of the mailpiece, the mailpiece including the digital postage mark and a destination address block (Pintsov, Column 8 Line 28);
retrieving a representative portion of a destination address block image in its original form from the digital signature (Pintsov, Column 5 Line 29);
comparing the representative portion of the destination address block image with the second digital data obtained from the scanned destination address block (Pintsov, Column 4 Line 6 - 17);
accepting the mailpiece when the comparison of the representative portion of the destination address block image with the second digital data is within a predetermined threshold (Pintsov, Column 8 Line 27 - 29).

As per claim 7, Pintsov teaches rejecting the mailpiece when the comparison of the representative portion of the destination address block image with the second digital data is beyond a predetermined threshold (Pintsov, Column 8 Line 27 - 29).
